

What is Claimed:

1. A wireless interface for Removable Digital Content Security Devices for delivering a stream of decrypted program content to a plurality of consumer electronics devices, comprising:

5 security device means, connected to a first consumer electronics device, for receiving a stream of encrypted program content from a source;

decryption means for converting said received encrypted program content to decrypted program content; and

10 wireless transmitter means for wirelessly transmitting said decrypted program content to at least one other consumer electronics device.

2. The wireless interface of claim 1 further comprising:

15 wireless receiver means, located in a one of said at least one other consumer electronics device, for receiving said decrypted program content for use in said one of said at least one other consumer electronics device.

3. The wireless interface of claim 1 wherein said wireless transmitter means implements wireless link layer and wireless physical layer protocols.

20 4. A method of using a wireless interface for Removable Digital Content Security Devices for delivering a stream of decrypted program content to a plurality of consumer electronics devices, comprising:

25 receiving in a security device, connected to a first consumer electronics device, a stream of encrypted program content from a source;

decrypting said received encrypted program content to decrypted program content; and

wirelessly transmitting said decrypted program content to at least one other consumer electronics device.

30 5. The method of using a wireless interface of claim 4 further comprising:

receiving in a wireless receiver, located in a one of said at least one other consumer electronics device, said decrypted program content for use in said one of said at least one other consumer electronics device.

6. The method of using a wireless interface of claim 4 wherein said step of receiving in a wireless receiver implements wireless link layer and wireless physical layer protocols.
